

Phloz

Every truck, every trip and every
rupee — running on **one system.**

THE PROBLEM

Your fleet already has software. It's just **nine different ones**, and none of them talk.

Every handover between them is re-typing, and every re-typing is a place the number changes. So the questions that decide the business get answered late, or by feel:

- Did **MH 12 AB 1234** make money last month, or did diesel and tyres eat it?
- Which of my lanes is quietly running at a loss?
- How many trucks stood idle this week, and whose?

The books close six weeks after the month does. By the time a bad lane shows up in the P&L, you have already run it forty more times.

WHAT PHLOZ IS

One software for **everything** a fleet operator does — from the indent to the ledger entry.

Phloz is a fleet ERP built for Indian transport operations. Demand capture, dispatch planning, trip execution, ePOD, billing, driver settlements, maintenance, compliance and double-entry accounting are not integrations. They are the same system, writing to the same rows.

ENTERED ONCE

The trip is the record

A consignment booked in operations is the same object that gets tracked, proved, invoiced and posted. Nobody re-keys it into accounts.

PRICED FROM THE START

Costed before it moves

Rate card, lane distance, fuel surcharge and GST resolve at booking — so the margin on a load is known before a driver is assigned to it.

CLOSED THE SAME DAY

Books that keep up

Invoices, vendor bills, trip expenses and fuel purchases post themselves to a real double-entry ledger as they happen.

END-TO-END WORKFLOW

Indent to receipt, without re-typing anything.

One unbroken chain. Each step inherits everything the last one knew, and each step leaves an audit trail behind it.

- Shortage and damage are fields on the ePOD, not an argument on the phone
- Billing the same consignment twice returns the existing entry – revenue never double-counts

Tomorrow's plan, costed before the trucks move.

The dispatcher loads the day's demand and gets back a feasible, priced plan instead of a whiteboard. The solver respects capacity, temperature class, body type and time windows — and prices the decision every operator makes a hundred times a month: **run it on my own truck, or hire it out?**

- 01 **Collect** — pull tomorrow's indents and open orders into one plan
- 02 **Solve** — route own dry, own reefer and attached capacity against a costed objective
- 03 **Commit** — one action turns the plan into real orders, trips and hire requirements

Anything the solver can't serve profitably in-house surfaces as a hire requirement you can send out for quotes, rather than disappearing.

Plan • Tomorrow • Bhiwandi hub

SOLVED

Loads to serve	48
Own vehicles used	31
Hire requirements raised	6
Planned distance	9,412 km
Own-run cost	₹ 7,84,300
Hire cost	₹ 2,16,000
Projected margin	+₹ 3,42,900

Illustrative plan output. Commit lands every route on a real trip sheet.

The most expensive truck you own is the one **standing still**.

A truck earns on the days it moves and costs on all of them. Phloz measures utilisation off the trips themselves — so idle days, empty return legs and half-filled bodies are visible while you can still do something about them.

STANDING TIME

Idle days per vehicle

Which trucks aren't turning, in which branch, and since when.

FILL RATE

Weight and volume used

Capacity actually sold against capacity dispatched.

KM PER LITRE

Mileage by vehicle

Computed from each fill-up against the previous odometer reading.

RETURN LEGS

Empty running

The kilometres you pay for twice and bill for once.

Advances, bhatta and settlements — closed to the rupee, not the diary.

The driver's account is a ledger, not a page in the munshi's notebook. Advances released on dispatch, on-road spends captured against the trip, and the settlement that nets them off at the end of it.

DRIVER MASTER

The whole file

Licence and its expiry, Aadhaar, police verification, reporting branch and current trip status — one record per driver.

MONEY ON THE ROAD

Advance & expense

Cash released on dispatch, then toll, bhatta, loading, unloading, parking, halting, RTO and police spends booked against the trip.

SETTLEMENT

Netted, then posted

Trip closes, expenses net against the advance, the balance is payable or recoverable — and the ledger entry writes itself.

ACCOUNTABILITY

Issues from the cab

Breakdowns, tyre failures, accidents and check-post delays reported against the vehicle and the trip they happened on.

■ Expenses the driver paid credit driver advances; expenses the office paid credit cash – the distinction the books need, captured at entry

No truck leaves the yard on an expired fitness certificate.

Every vehicle carries its papers, its service history and its running costs in one record. Statutory documents sit on a renewal watchlist; preventive maintenance is scheduled by odometer *and* calendar, so a service is due when the truck says so, not when someone remembers.

Papers tracked: RC, insurance, fitness, national and state permits, PUC, road tax, FASTag KYC, GPS certificate

Per vehicle: diesel and mileage, tyres, maintenance jobs, on-road expenses, loan and EMI head

Fleet shapes: own, attached, leased and hired — grouped into fleets, optionally owned by a vendor

Renewal watchlist · next 30 days

4 DUE

VEHICLE	DOCUMENT	EXPIRES	STATUS
MH 12 AB 1234	Fitness certificate	04 Sep	BLOCKED
MH 43 CG 8871	Insurance	11 Sep	DUE
GJ 01 KT 4502	National permit	19 Sep	DUE
MH 46 BQ 0097	PUC	02 Oct	RENEWED

Illustrative. A blocked vehicle can be kept out of the dispatch plan.

P&L at every level you actually manage — not just the one you file.

A company-level P&L tells you the year went well. It never tells you which truck, which lane or which customer paid for it. Because every operational document posts to the ledger with a cost centre on it, the same books answer all six questions.

01	Trip	Freight earned less diesel, tolls, bhatta and handling on that trip sheet	₹ 48,200	+18.4%
02	Vehicle	Order revenue netted against diesel and on-road spend per truck — the number a fleet owner lives by	₹ 9,74,000	+22.1%
03	Lane	Rate-card projection against actual running cost on the corridor	₹ 41,20,000	+16.8%
04	Customer	Billed revenue, realisation and what is still sitting in ageing	₹ 1,84,00,000	+14.2%
05	Branch	Every ledger line carries its branch, so the trial balance and P&L filter down to a depot	₹ 6,42,00,000	+11.6%
06	Company	Consolidated for the Indian April–March fiscal year	₹ 24,80,00,000	+9.8%

■ Illustrative figures, each at its own scope and period ■ Cost centres tag any line to a **truck, branch, route or driver** — so a new cut doesn't need a new report

Operations post themselves. The books are never a month behind.

What happens, and what it posts		DOUBLE ENTRY
EVENT IN OPERATIONS	ENTRY IN THE LEDGER	
Customer invoice	Dr Sundry debtors · Cr Freight income · Cr Output GST	
Vendor bill	Dr Expense head · Dr Input GST · Cr Sundry creditors · Cr TDS payable	
Receipt	Dr Bank · Cr Sundry debtors	
Payment	Dr Sundry creditors or Driver advances · Cr Bank	
Trip expense	Dr the matching head · Cr Driver advances, else Cash	
Fuel purchase	Dr Diesel · Cr the wallet it was bought on	

Real double entry, not a summary table. Every financial event becomes a balanced journal entry, and the reports are derived from those lines — which is what keeps the books consistent when eleven people are entering data at once.

SEVEN REPORTS, OUT OF THE BOX
Trial balance · by branch
Profit & loss · any period
Ledger · any account
Receivable ageing · current / 30 / 60 / 90 / 90+
Payable ageing
Vehicle profitability
GST summary

29 ledger heads seeded for an Indian transporter · GST and TDS on vendor bills

Two guards: an unbalanced entry is rejected, and nothing posts to a group heading

Posting is idempotent per document — the same invoice never books revenue twice

BUILT FOR INDIA

Freight here doesn't move like freight anywhere else. Neither does Phloz.

Not a global fleet product with a rupee symbol bolted on. The rules Indian transport actually runs on are modelled in the data, not worked around in a comments field.

TAX

GST & reverse charge

5% GTA without ITC or 12% with it, and an RCM flag that returns zero tax and marks the consignee liable.

PAPERWORK

E-way bill & LR

E-way bill number on every order; lorry receipt conventions — to-pay, paid, to-be-billed and COD.

CONTRACTS

Diesel escalation

Fuel surcharge as a percentage on freight before tax, the way Indian rate contracts are written.

ON THE ROAD

Cash the driver spends

Toll and FASTag, bhatta, loading, unloading, RTO fine, police, parking, permit and halting.

PRICING

Per ton-km and four more

Per km, per ton-km, per kg, per hour and fixed per trip — priced off the lane, with a freight estimator.

STATUTORY

The RTO file

Fitness, national and state permits, road tax, PUC, FASTag KYC — each with its renewal date watched.

CALENDAR

April to March

Indian fiscal years, Asia/Kolkata, and lakh-crore rupee formatting throughout.

CAPACITY

Attached & hired trucks

Brokers and attached transporters are first-class: vendors with GSTIN, PAN, MSME, TDS % and payment terms.

ONE SOFTWARE FOR ALL NEEDS

One login. Every department.

Sales books the load, operations runs it, the workshop keeps it legal and accounts closes it — all inside the same system, each seeing only what their role allows.

SALES & COMMERCIAL

- Sales pipeline
- Customer master & KYC
- Rate management & lane pricing
- Freight estimator
- Lane margin projection
- Quotations

TRANSPORT OPERATIONS

- Demand capture & indents
- Dispatch planning
- Consignment booking & waypoints
- Trip sheets
- Tracking & public consignment link
- ePOD with OTP
- Vendor hire & partner network
- Operating regions & geofencing

FLEET & COMPLIANCE

- Fleet master & fleet groups
- Driver master
- Fuel & mileage
- Preventive maintenance
- Incidents & breakdowns
- Compliance documents
- Location master

FINANCE & ADMIN

- Freight billing
- Billing & collections
- Payables & vendor bills
- Driver accounts & settlements
- Trip costing
- Chart of accounts & vouchers
- Financial reports
- Users, roles, branches, audit trail

Built for the day **no single person** touches every module.

A ten-truck operator and a thousand-truck operator need the same records — they differ in how many hands are on them. Phloz is architected for the second case and stays usable in the first.

7 roles ship ready to use — Administrator, Branch manager, Dispatcher, Accounts executive, Accounts manager, Workshop supervisor, Viewer

19 permissions, with read and write held apart — viewing the ledger, creating a voucher and posting it are three separate rights

∞ branches, depots, warehouses and workshops, each with its own state GST registration

AUDIT TRAIL

Who changed what

Every create, update and delete, with the person and the IP behind it. Read-only, always.

BRANCH SCOPING

Your depot's data

A login carries a role and a branch — reports, ledgers and trips narrow to it automatically.

DEPLOYMENT

Cloud or your own server

Managed on phloz.app, or on your infrastructure. Postgres, a REST API, no exotic dependencies.

OPEN BY DESIGN

An API for everything

Every module is a documented REST resource — GPS vendors, weighbridges and Tally can all be fed from it.

WHY OPERATORS CHOOSE IT

Four things most fleet software **makes you give up.**

01 · INSTEAD OF

A tracking app, plus Tally, plus Excel

Operations and books, one system

The consignment your dispatcher books is the row your accountant closes. No export, no reconciliation, no month-end surprise.

02 · INSTEAD OF

A P&L once a quarter

Margin per truck, live

Profitability is computed from ledger lines as they post — per trip, vehicle, lane, customer and branch.

03 · INSTEAD OF

A global product, localised later

Indian rules in the model

RCM, e-way bills, bhatta, FASTag, per ton-km and April–March are data structures here, not workarounds.

04 · INSTEAD OF

A six-month implementation

Seeded and running

Chart of accounts, roles, permissions and fiscal year are seeded on day one. You start from a working system.

GET STARTED

Bring us one month of your trip sheets. We'll show you **where the margin went**.

A working walkthrough on your own lanes, your own trucks and your own rate cards — not a generic demo tenant.
